

imarket

imarket is an e commerce portal which will make business processes involving intermediaries and insurers in the UK insurance market quicker, simpler and more cost-effective.

imarket offers intermediaries access to a broad range of insurer products and services, such as insurance product quotations and claims tracking, via a single sign-on to the portal. A secure email service is also available.

To access imarket all an intermediary needs is a web browser (Internet Explorer 5.5 or later which is supplied free with most PCs) and a modem. Beyond existing online communications costs there are no charges to use the service.

The range of services and products available is growing daily, enabling intermediaries to use the portal for an expanding range of activities.

imarket complements intermediaries existing systems and most of the industry's suppliers are working to integrate portal facilities into their offerings.
